

Total Product Solution

- **Competitive Markets.**
- **Busy developing new products.**
- **Need support in cost reduction of existing revenue generators.**

Plextek can provide you with the total solution from design to full volume manufacture.

Whether you have a new idea, or an existing mature product, we can step in at any point in the process to help, whether in design or manufacture.

Client Product Concept

Our experienced engineering team can help to establish main product features and functionality by assisting in producing the 'product vision document'.

We can then help with the identification of the processes and technologies required to realise the product.

Source Strategic Manufacturing Partners

Plextek's engineers will seek out effective partners to provide the correct components and processes to make your product a cost efficient reality.

Value Engineering

With rapid 'life cycle' products, you may decide that your valuable design resource is already too allocated to support your current revenue generators. Plextek's engineers

can intercede, providing value analysis in terms of product design, processes and material supply to extend existing product life at a lower cost.

Design Process/Concurrent Engineering/DFX

Plextek's manufacturing services engineers liaise at all stages of the design process to ensure maximum efficiency as the product goes to manufacture. As well as assembly process, the test philosophy is established early in the programme to ensure cost effective testing of the product.

Rapid Prototyping

Plextek has close ties with several rapid prototyping facilities. This enables us to quickly produce low cost production representative units which can be used for marketing or approvals testing.

Communications Technology
Consultants

Approvals

Plextek Consultants can make all the preparations, and carry out approvals testing. This includes pre-certification measurements at Plextek's own facilities and technical liaison with the test house. In the case of technical interpretation issues which can arise with new products or specifications, we can also negotiate with test houses or regulatory authorities.

New Product Introduction

Manufacturing engineers handle the introduction of the entire process to the factory. This is through liaison with either a specified Contract Manufacturer or with your own Manufacturing facility.

Support Services

Manufacturing and test development engineers provide hands on engineering support, to ensure successful product roll-out.
